## Balance in Signed Networks

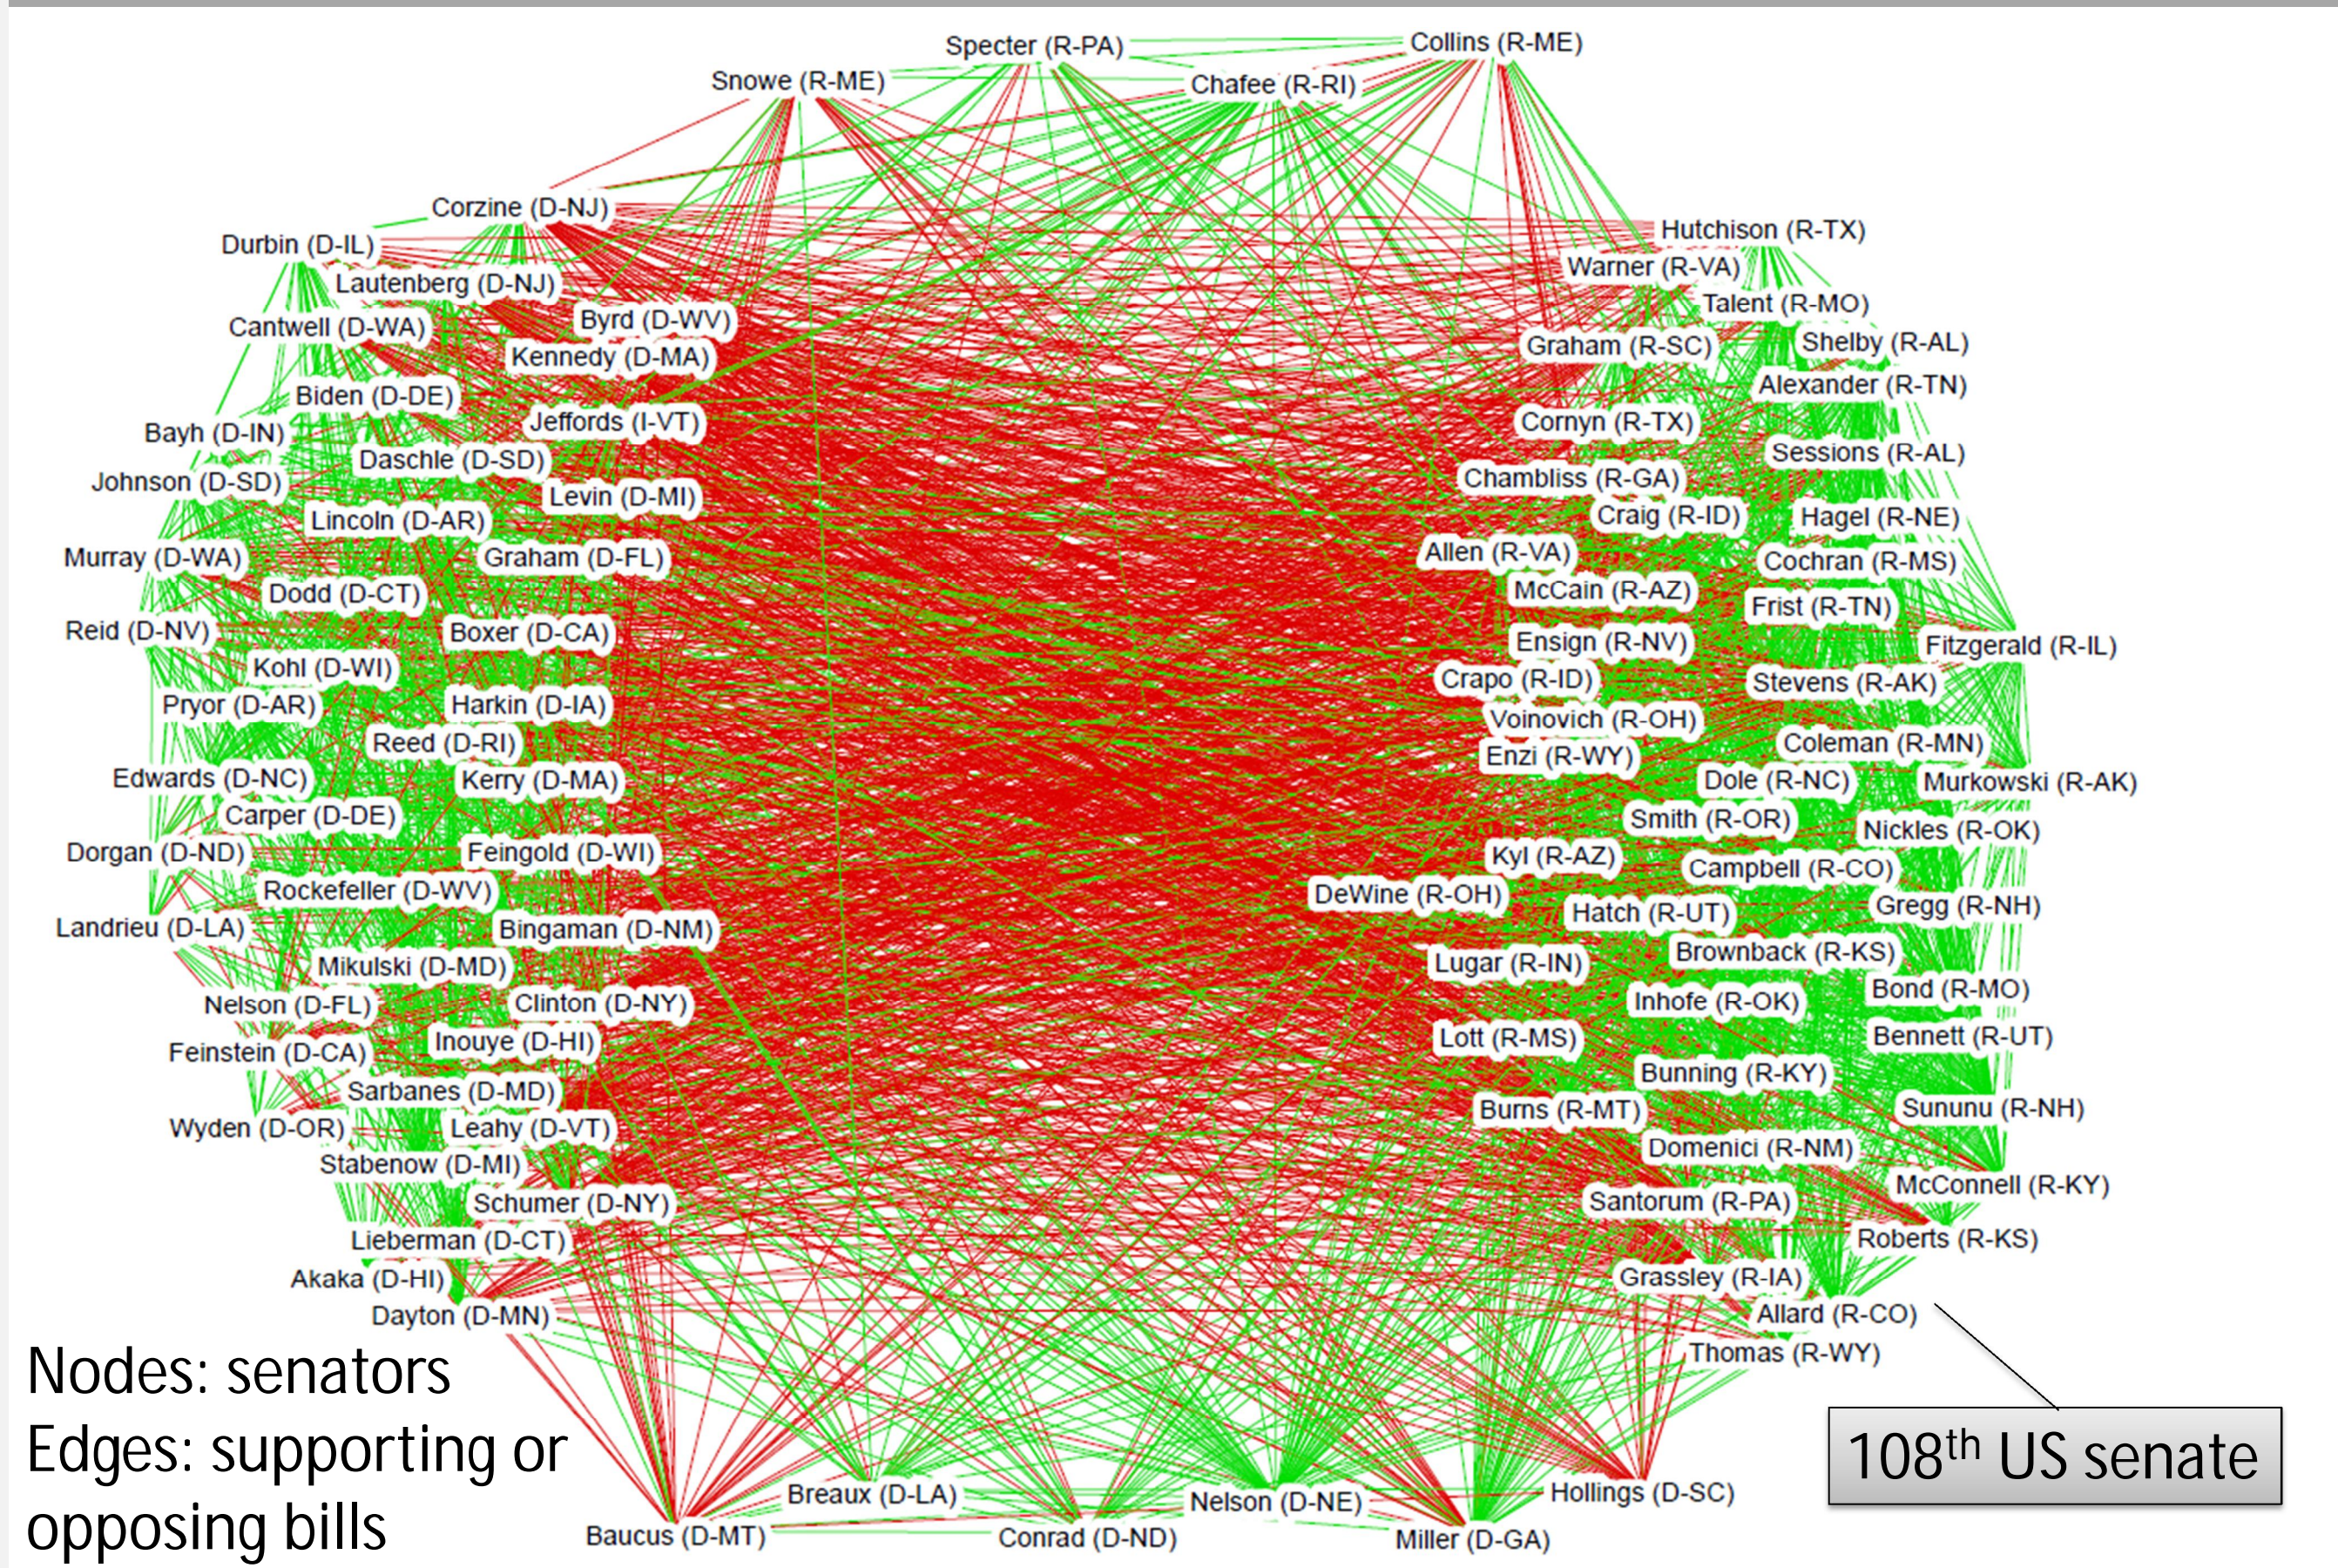

Unbalanced networks can be made balanced by removing the frustrated edges.

Frustrated edges:

- positive edges with different endpoint colours
- negative edges with the same endpoint colours

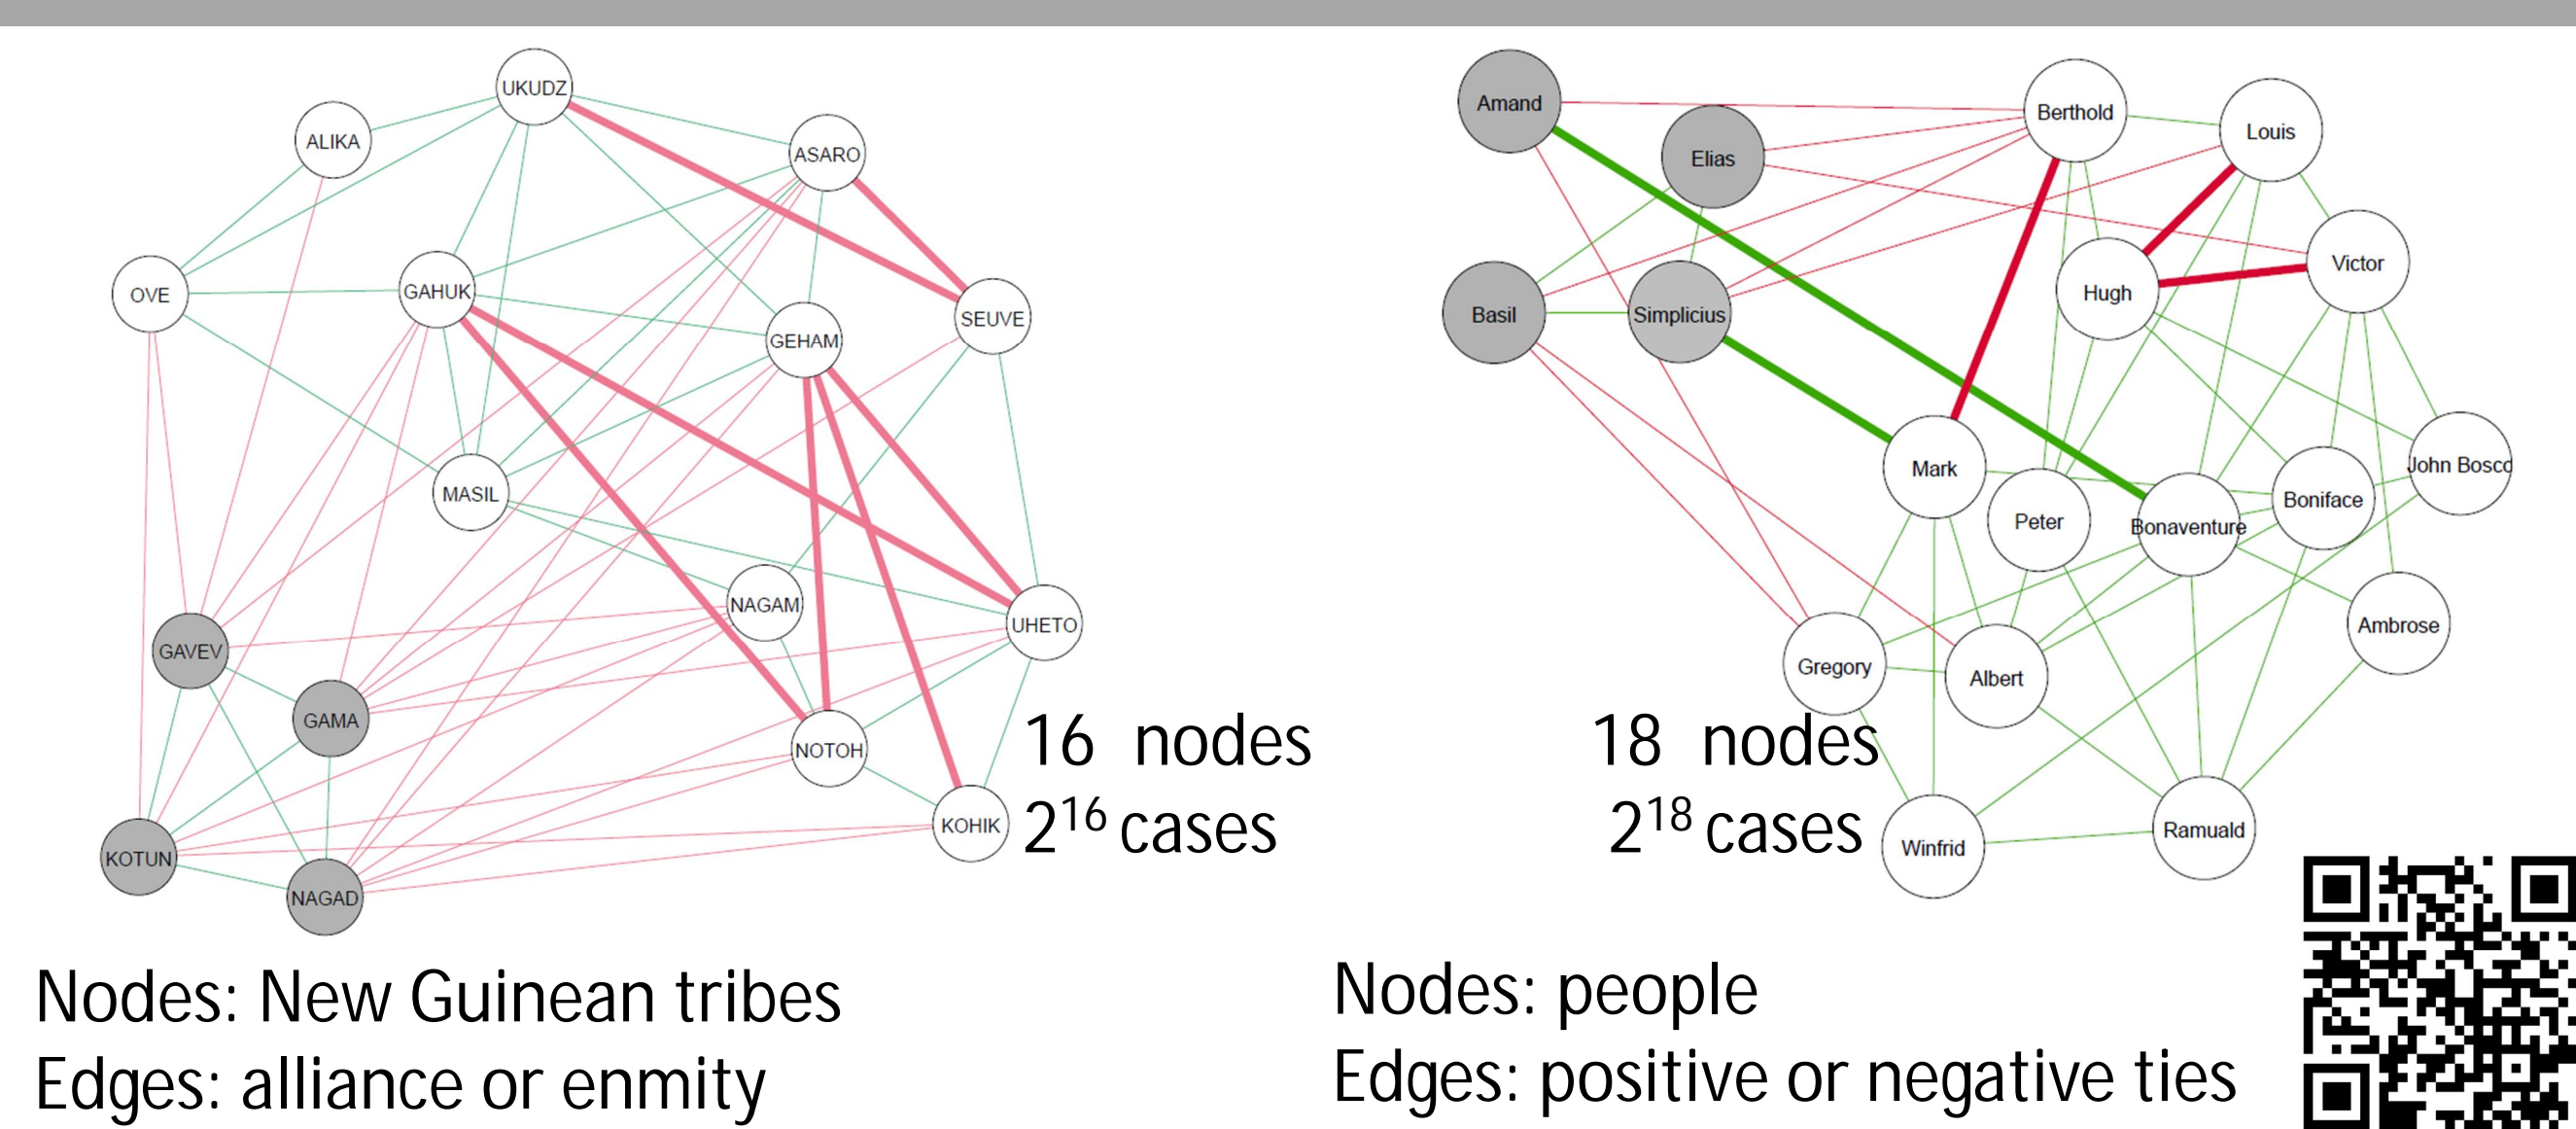

## Political Networks

Nodes: senators  
Edges: supporting or opposing bills

108<sup>th</sup> US senate

## Social Networks

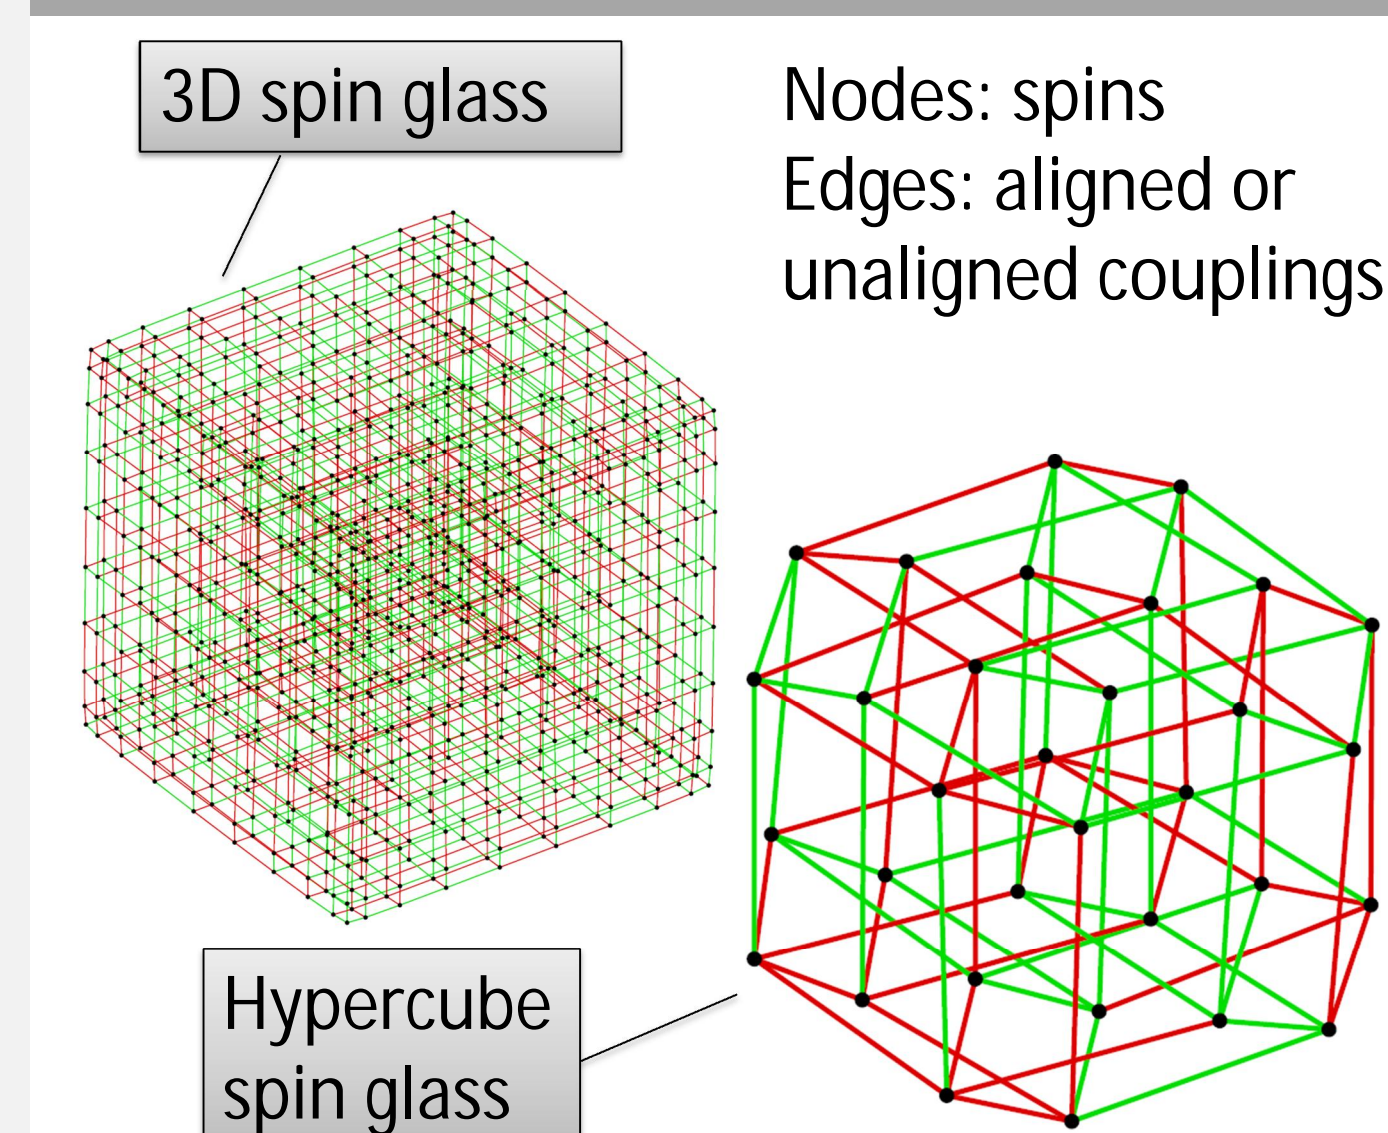

Nodes: New Guinean tribes  
Edges: alliance or enmity

Nodes: people  
Edges: positive or negative ties

## Ising Models (Physics)

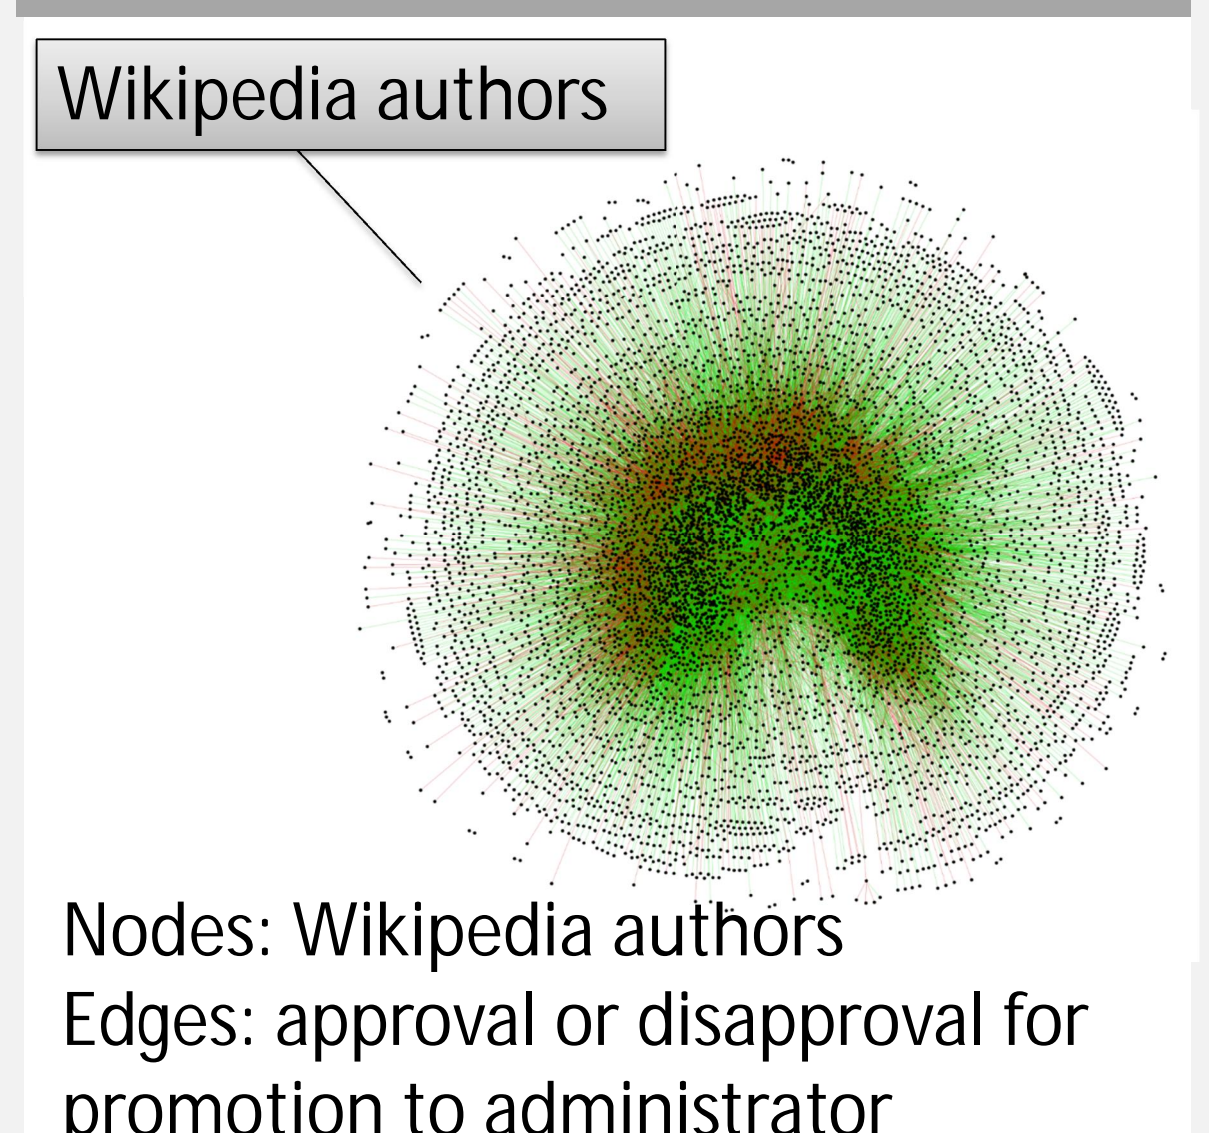

3D spin glass

Nodes: spins  
Edges: aligned or unaligned couplings

Hypercube spin glass

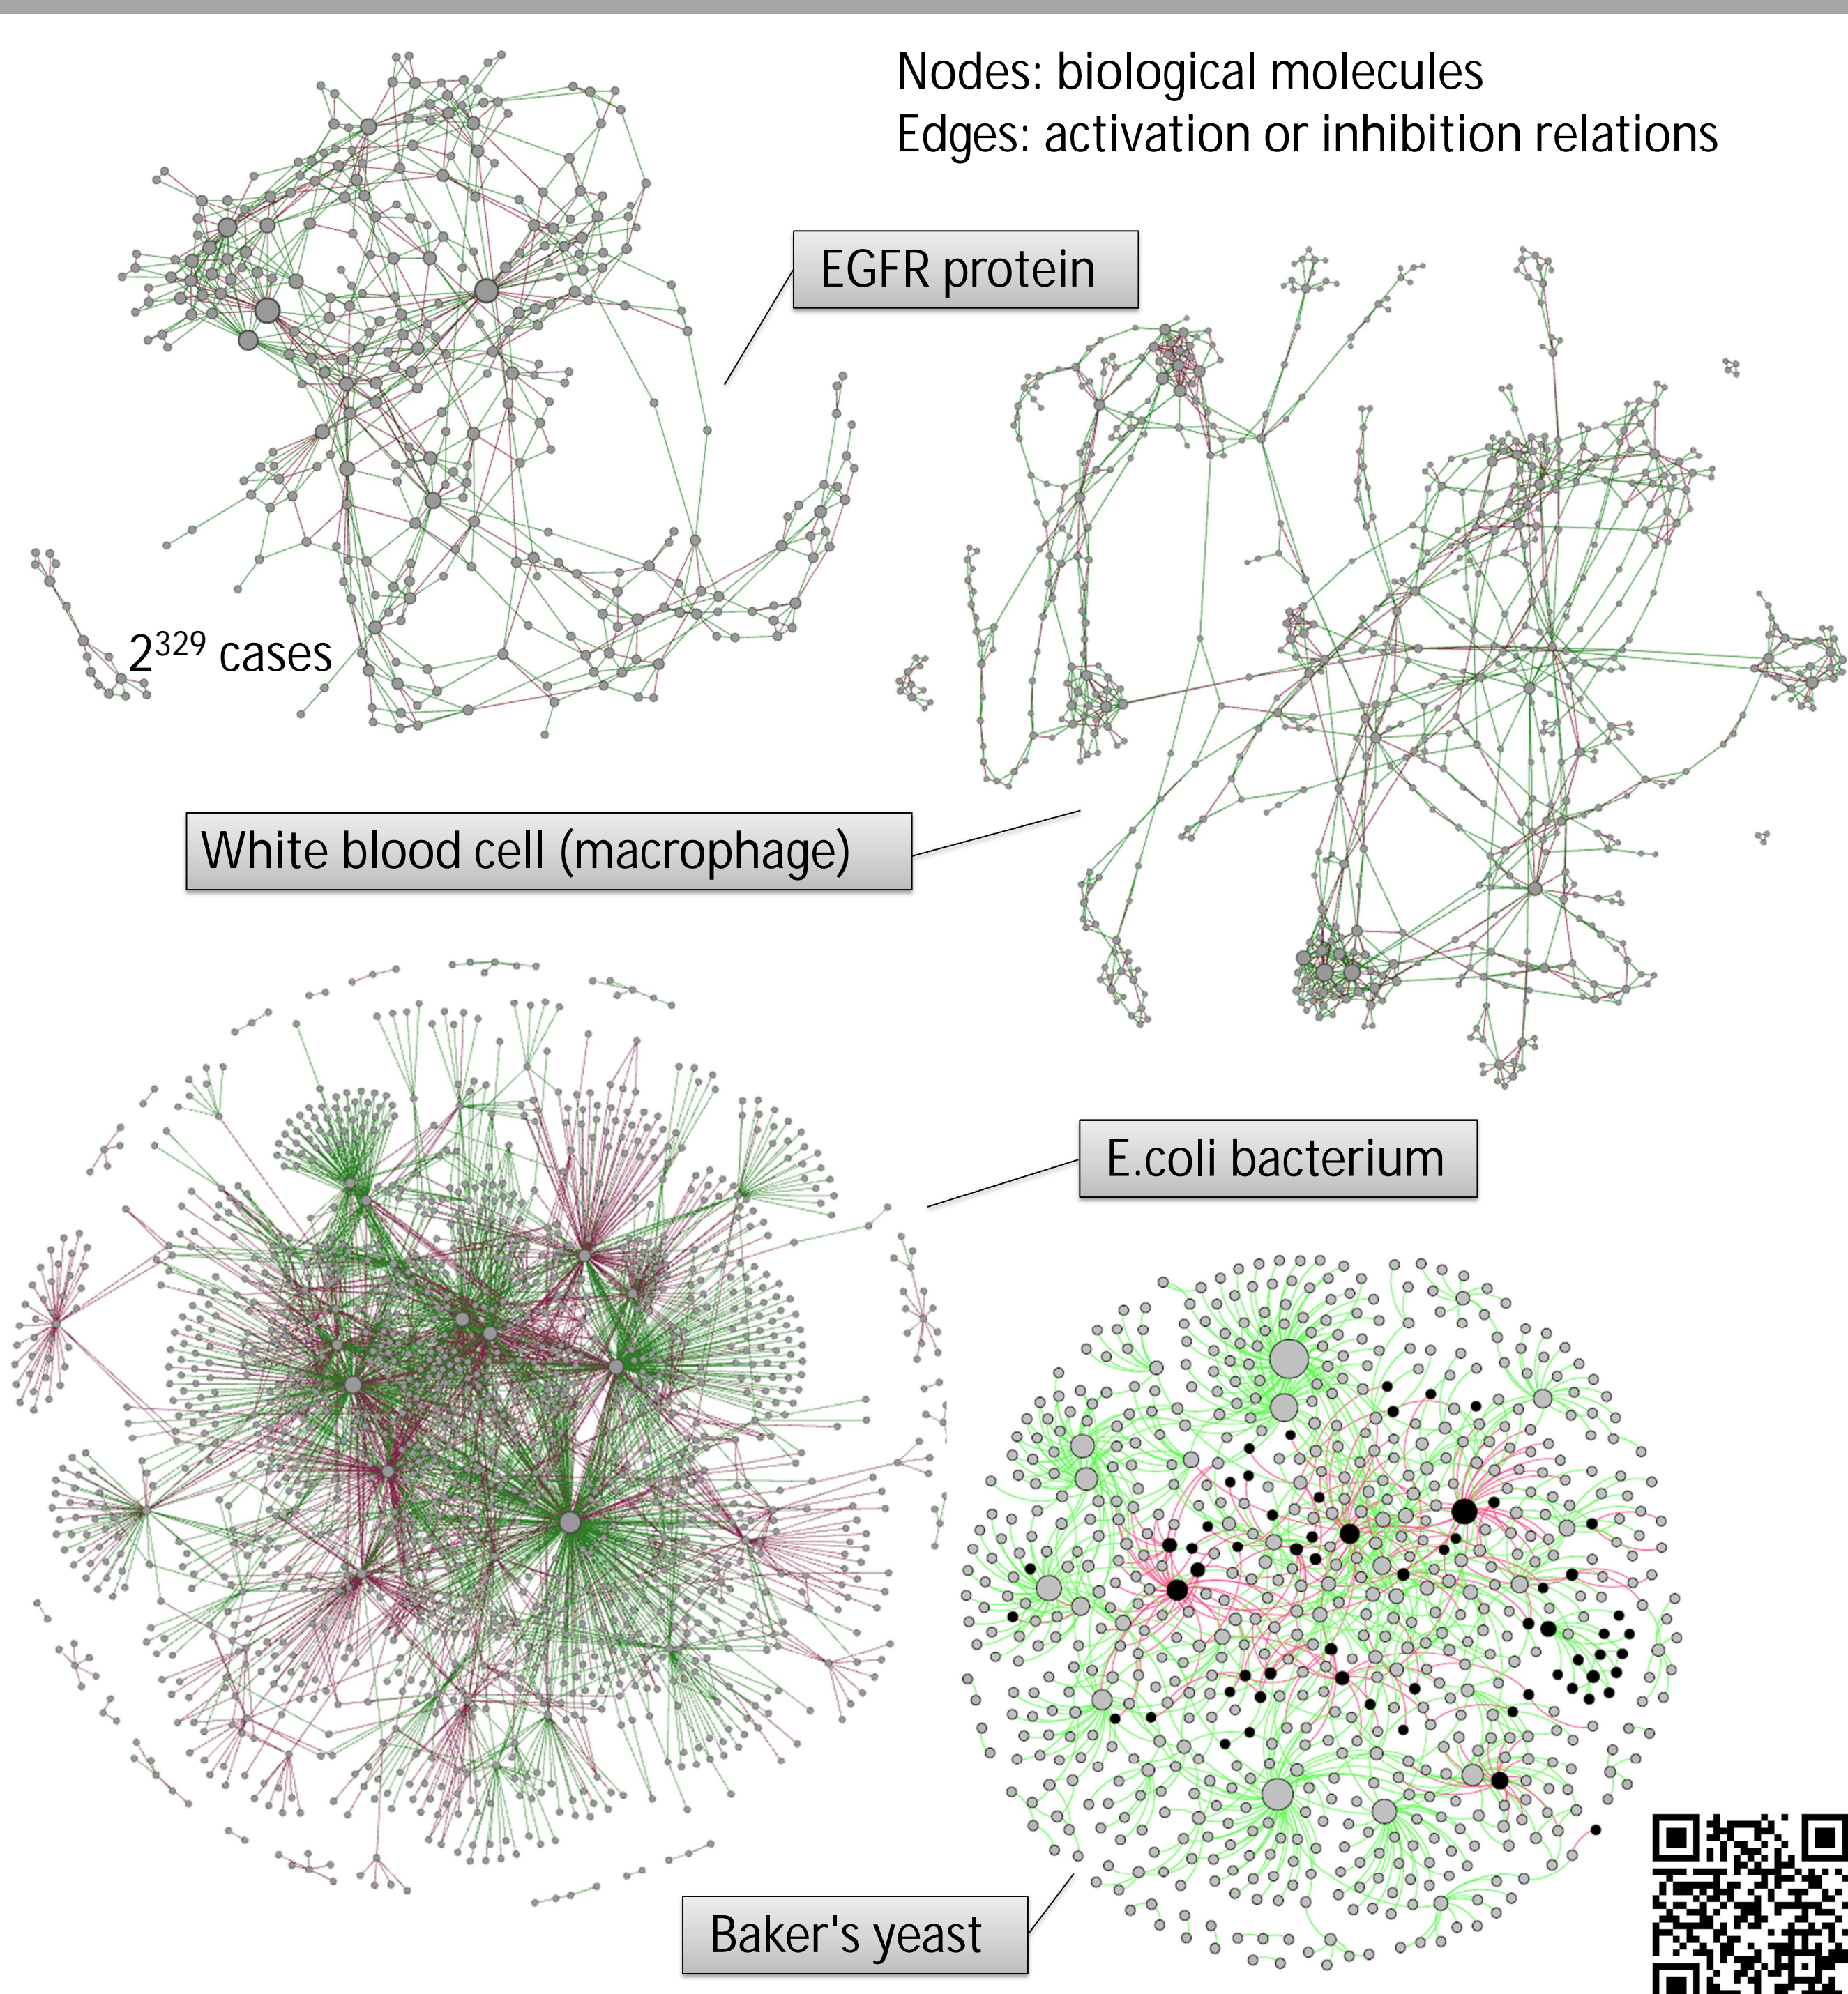

## Large-scale Social Networks

Wikipedia authors

Nodes: Wikipedia authors  
Edges: approval or disapproval for promotion to administrator

## Biological Networks

Nodes: biological molecules  
Edges: activation or inhibition relations

EGFR protein

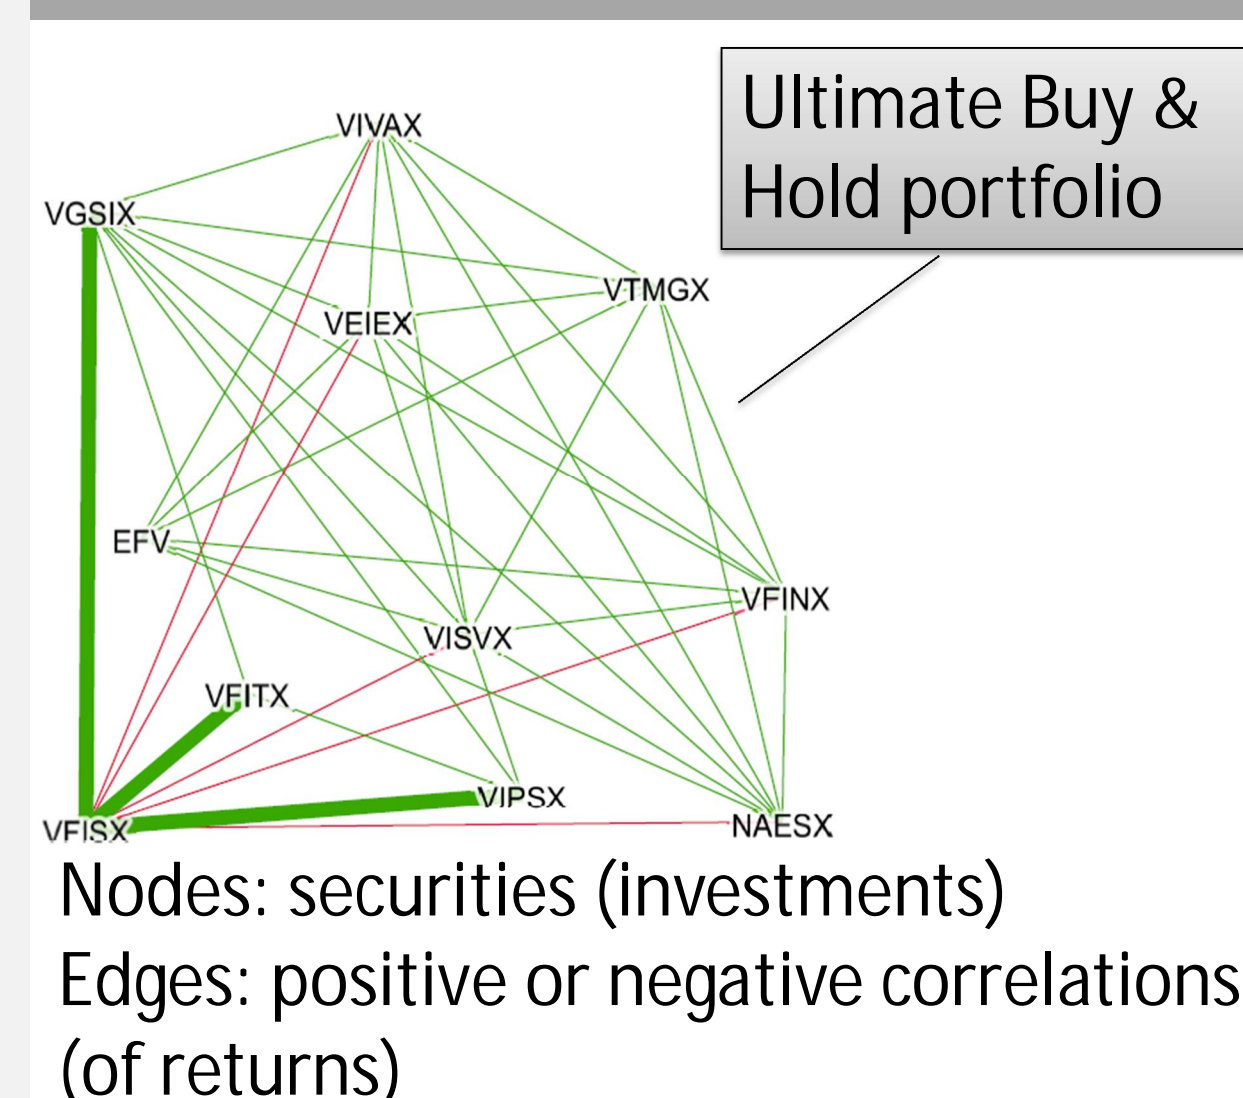

White blood cell (macrophage)

E.coli bacterium

Baker's yeast

## Financial Networks

Ultimate Buy & Hold portfolio

Nodes: securities (investments)  
Edges: positive or negative correlations (of returns)

## Fullerenes (Chemistry)

Nodes: carbon atoms  
Edges: atomic bonds

C240 fullerene

C240 fullerene balanced subgraph

## International Relations Networks

Nodes: countries  
Edges: international relations

International relations 1946-1996
